

Round Travertine Pendant Light

Description

This crescent travertine disc pendant layers two round travertine discs slightly offset from each other, so a crescent-shaped sliver of light glows from behind the front disc rather than shining evenly across the whole surface. The effect reads like a sliver of moonlight caught between two stone panels, with the travertine's natural veining visible across the front face even when the light is off. Sized at Ø7.9" x H7.9" in a yellow travertine finish, it suits an entryway, dining nook, or living room accent wall looking for a sculptural stone pendant with a distinct crescent light reveal.

Drawing
